Blockchain & Solidity

Use case

S2BCacademy

Project: Tamacoinchi

Team: Group 7

Member: Enis Tola, Florian Huber, Alexander Parr

- S2BCconsult
- S2BCacademy
- S2BCcoach

MORPHEUS LABS SEED

What is the use case?

Tamacoinchi is a new version of Tamagochi from the 90s. The idea behind it is to provide gamers an opportunity to raise their own virtual pet, hosted on the blockchain. Additionally, it will provide them with a fun experience as well as some first, playful touchpoints with the blockchain and how to interact with it.

Tamacoinchi lets a user create their own pet, feed it as well as interact with other players by helping them out in need.

The dApp is a great opportunity to get kids, elderly people as well as digital illiterates to interact with their first blockchain application. It gets them on the right track to an inclusive life with everyone else out there who will be using blockchain technology in the future.
